Industry

Brief Story

In the field of industry, considering that Yazd province is the pioneer compared with other cities in Iran, there are more than 7000 exploitation licenses in the form of small and medium-sized industries (SMEs), and almost 90% of these exploitations have been done by small and medium-sized enterprises (SMEs), and the remaining done by giant corporations, who are mainly engaged in the field of steel and mining industries. In order to gain the investor's attraction in these fields, MIDA is facilitated and ready to discover attractive opportunities, especially in the downstream industries of steel, considering the climatic conditions and market supply and demand. In the field of modern construction materials, biology, as well as ceramic tiles, textiles, tourism and camel breeding, which is suitable for Yazd's climate and camel breeding conditions, Yazd province is undoubtedly the leader. For more information about investment opportunities and case studies, you can contact us through the communicational ways mentioned.
